**COMMENTS:**

I. LEVEL OF DATA REVIEW

Modified full data review was performed for this data package.

II. CONTRACTUAL ASSESSMENT OF THE DATA PACKAGE

CCS determined that the laboratory was contractually compliant. The reviewer detected the following items not mentioned in the CCS report.

- A. The laboratory reanalyzed the storage blank because it failed the contractual criteria for DMC performance (OLC03.2, D-45/VOA, 12.1.5.3) and it had a bromoform concentration that exceeded the CRQL (OLC03.2, D-46/VOA, 12.1.5.7). The reanalysis brought the bromoform concentration below the CRQL but repeated the poor DMC performance. The DMC recovery problem did not affect the storage blank data usability.
- B. Method blank VBLK8B had a bromoform concentration that exceeded the contract-allowed limit (OLC03.2, D-46/VOA, 12.1.5.7). This ongoing problem caused the bromoform results to be qualified for two samples.

III. TECHNICAL USABILITY ASSESSMENT OF THE DATA PACKAGE

The total number of sample results reviewed was 1,000 for this data package. Some results were qualified because of technical problems, and the significant problem is addressed below.

Two samples had low VDMC12 recoveries.

**ACTION ITEMS:**

**AREA OF CONCERN:** Contractual Issues: The storage blank and its reanalysis failed DMC performance criteria. Method blank VBLK8B had excessive bromoform contamination. Technical Issues: Laboratory contamination caused the qualification of six bromoform results. Poor DMC performance caused the qualification of some results for two samples.

**NOTABLE PERFORMANCE:**

COMMENTS/CLARIFICATIONS  
REGION 6 CLP QA REVIEW  
Jones Road  
CASE 34837 SDG F1XB2 SITE Ground Water Plume LAB SHEALY

The following is a summary of sample qualifiers used by Region 6 in reporting this CLP data:

| No. | Acceptable | Provisional | Unacceptable |
|-----|------------|-------------|--------------|
| VOA | 14         | 6           |              |

**COMMENTS:** This SDG consisted of 17 water samples, one trip blank, and two field blanks for VOA analysis by Low Concentration SOW OLC03.2. The sampler requested laboratory QC analyses for samples F1XC2 and F1XE0, but the laboratory documented that sample F1XE0 was chosen for laboratory QC analyses after SMO was contacted. The sampler identified sample F1XF6 as the trip blank and samples F1XM7 and F1XM8 as the field blanks. Most of the field samples in this SDG were associated with these field QC samples as well as field blank sample F1XN7 in SDG F1XB3. The data package arrived on time for the seven-day turnaround requirement, but the reviewer detected the following contractually noncompliant items.

- The storage blank and its reanalysis failed DMC performance criteria.
- Method blank VBLK8B had excessive bromoform contamination.

Modified full review was performed for this package as requested by the Region. The target compounds of concern with the user's desired detection limits in parentheses were vinyl chloride (2 µg/L), trans- and cis-1,2-dichloroethenes (7 µg/L), and tetrachloroethene (5 µg/L). All samples met the desired detection limit criteria. No sample contained vinyl chloride. The remaining compounds of concern were detected at various concentrations in nine samples, but the only concentrations above the user's desired detection limits were for cis-1,2-dichloroethene and tetrachloroethene in sample F1WX4. Sample F1WX4 required reanalysis at 20X dilution to bring these concentrations within the calibration range. The only target compounds not designated as compounds of concern that were detected at concentrations above the CRQL's in the samples were trichloroethene and laboratory contaminant bromoform. Two samples had low VDMC12 recoveries.

Some results were qualified for six samples because of problems with laboratory contamination and/or DMC performance. The technical usability of the reported results is indicated by ESAT's final data qualifiers in the Data Summary Table (DST). An Evidence Audit was conducted for the Complete Sample Delivery Group File (CSF), and the audit results were reported on the Evidence Inventory Checklist.

**NOTE:** THE FOLLOWING REVIEW NARRATIVE ADDRESSES BOTH CONTRACTUAL ISSUES (BASED ON THE STATEMENT OF WORK) AND TECHNICAL ISSUES (BASED ON THE NATIONAL FUNCTIONAL GUIDELINES). THE ASSESSMENT MADE FOR EACH QC PARAMETER IS SOLELY BASED ON THE TECHNICAL DATA USABILITY, WHICH MAY NOT NECESSARILY BE AFFECTED BY CONTRACTUAL PROBLEMS. THE ASSESSMENTS ARE DEFINED BELOW.

- Acceptable = No results were qualified for any problem associated with this QC parameter.  
Provisional = Some results were qualified because of problems associated with this QC parameter.  
Unusable = All results are unusable because of major problems associated with this QC parameter.

**1. Holding Times:** Acceptable. All samples were analyzed within the contractual and technical holding time limits. The pH values indicated that the samples were preserved with acid.

**NOTE:** Polymerization of vinyl chloride and styrene is likely to occur in acid-preserved samples and could cause low biased results for these analytes.

**2. Tuning/Performance:** Acceptable. BFB analyses met GC/MS tuning criteria.

**3. Calibrations:** Acceptable. All target analytes met the contractual calibration criteria. Several analytes failed the technical %D calibration criteria but were not detected in the associated samples. Qualification of results was not required.

**4. Blanks:** Provisional. Method blanks VBLK21 and VBLK7B met contractual criteria, but method blank VBLK8B and the storage blank had bromoform concentrations that exceeded the CRQL. The laboratory reanalyzed the storage blank which had also failed contractual criteria for DMC performance. The reanalysis had an acceptable bromoform concentration but repeated the poor DMC performance. The reviewer used the original analysis results for the storage blank to assess the effects of laboratory contamination. Methylene chloride, chloroform, benzene, 1,2-dichloroethane, bromodichloromethane, toluene, bromoform, and/or 1,2,4- and 1,2,3-trichlorobenzenes were detected at concentrations below the CRQL's in the blanks. It appeared that the chloroform and bromodichloromethane contamination occurred during sample storage at the laboratory, not during the sample analysis. The effects of the laboratory contamination are summarized below.

- The bromoform results above the CRQL for samples F1WR0, F1WX4, F1XC2, F1XF6, F1XM7, and F1XM8 were qualified as

undetected ("U"), and the concentrations should be used as raised quantitation limits ("M").

- All positive hits for chloroform, bromodichloromethane, and toluene as well as all remaining results with laboratory "B" flags (concentrations below the CRQL's) should be considered undetected and were flagged "U" at the CRQL's on the DST.

Trip/Field Blanks: All of the field samples in this SDG except for samples F1WR0 and F1WX4 were associated with the trip and field blanks in this SDG as well as field blank sample F1XN7 from SDG F1XB3. Field blank sample F1XN7 had no field contamination. The remaining field QC samples contained benzene, 1,2-dichloroethane, trichloroethene, total xylenes, and/or styrene at concentrations below the CRQL's. Because of the shipping and field contamination, all positive hits for benzene, 1,2-dichloroethane, and trichloroethene in the associated field samples (concentrations below the CRQL's) should be considered undetected and were flagged "U" at the CRQL's on the DST.

**5. Deuterated Monitoring Compounds (DMC's)/Surrogates:**

Provisional. The storage blank and its reanalysis failed contractual criteria for DMC performance, but the DMC recovery problem did not affect the storage blank data usability. All other analyses met the contractual DMC recovery criteria although four samples each had a DMC recovery outside of the QC limits. Because of low VDMC12 recoveries, the reviewer qualified as estimated and biased low the dibromochloromethane, 1,2-dibromoethane, and bromoform results for samples F1XF6 and F1XM8. The remaining outlying DMC recoveries were only marginally outside of the QC limits, so the reviewer did not qualify the associated results.

**6. Matrix Spike/Matrix Spike Duplicate/Laboratory Control Sample (MS/MSD/LCS):** Acceptable. All MS/MSD results were within the QC limits.

**7. Other QC:** Not Applicable.

**8. Internal Standards (IS):** Acceptable. IS performance was acceptable for all samples.

**9. Compound Identity (ID) /Quantitation:** Acceptable. Target compounds detected at concentrations above the CRQL's in the samples were cis-1,2-dichloroethene, trichloroethene, tetrachloroethene, and/or laboratory contaminant bromoform. Sample F1WX4 required reanalysis at 20X dilution to bring the cis-1,2-dichloroethene and tetrachloroethene concentrations within the calibration range. No compound identification or quantitation problem was detected.

10. **Performance/Completeness:** Acceptable. The data package was complete. The DST in this report is the final version.

11. **Overall Assessment:** Data were acceptable for 14 samples. Some results were qualified for samples F1WR0, F1WX4, F1XC2, F1XF6, F1XM7, and F1XM8 because of problems with laboratory contamination and/or DMC performance.
